## Technologies we use (plus more)

### Mobile

React  
Native

### Front-end

React

webpack

GraphQL

### Back-end

mongoDB

kafka

Bazel

# Allowed languages for home assignments

## Mobile

Swift

JS

 Kotlin

TS

Java

## Front-end

REASON

JS

Swift

TS

elm

... and any "front-end" language

## Back-end

Scala

node

C#

php

python

Kotlin

Java

... and any "modern" language

# Important Practices

(which we follow)

- Test everything
- Automate everything
- Simple over "smart"
- Designing for code reusability

...it all boils down to: we have a big system to maintain.

# Programming Skills

- OK not to know much.
- OK not to have design skills.
- BUT what you do use, you should know well.
- Programming fundamentals and practices!

# Learning

- OK not to be learning 24/7.
- OK not to have side-projects.
- OK not to have special interests.

We just want you be actively improving:

- Looking for opportunities.
- Willing to face roadblocks.
- Be very collaborative!

# Communication

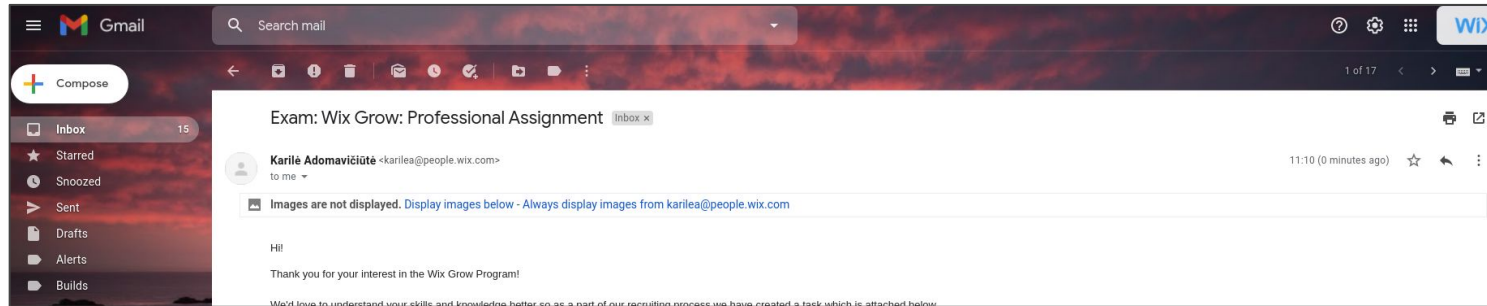

- Not the same as being extravert!
- You should freely communicate your ideas.
- Asking questions is part of "communication".
- One hard requirement: being comfortable communicating in English.

# Homework Assignment

# Task via Email

- It is important, do not delete or ignore it!

# Problem Definition

Full instructions

# Spreadsheet Evaluator

C1			=sum(B1,A1)
	A	B	C
1	4	6	=sum(B1,A1)

Take spreadsheet,  
compute values.

# What is a spreadsheet?

```
[  
  [ ... ], Row 1  
  [ ... ], Row 2  
]
```

	A	B	C	D	E	
1						
2						
3						

# What is a spreadsheet?

```
[  
  [  
    { ... }, A1  
    { ... }, B1  
    { ... }, C1  
  ],  
  [  
    { ... }, A2  
    { ... }, B2  
    { ... }, C2  
  ]  
]
```

	A	B	C	D	E	
1						
2						
3						

# A1 Notation

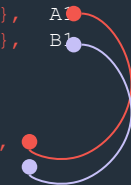

A1

Column

Row

# What is a spreadsheet?

```
[
  [
    { "value": { "number": 6 } }, A:
    { "value": { "number": 4 } }, B:
    {
      "formula": {
        "sum": [
          { "reference": "A1" },
          { "reference": "B1" }
        ]
      }
    }
  ],
  [ ... ]
]
```

C1	<i>fx</i>	=sum(B1,A1)	
	A	B	10 × C
1	4	6	=sum(B1,A1)

# Core of the task

```
[
  [
    { "value": { "number": 6 } },
    { "value": { "number": 4 } },
    {
      "formula": {
        "sum": [
          { "reference": "A1" },
          { "reference": "B1" }
        ]
      }
    }
  ]
]
```

```
[
  [
    { "value": { "number": 6 } },
    { "value": { "number": 4 } },
    { "value": { "number": 10 } }
  ]
]
```

Input

Output

# Cells

- Value

- Number

- Text

- Boolean

- Error

- Formula \*only in input

```
{ "value": { "number": 123 } }  
{ "value": { "text": "abc" } }  
{ "value": { "boolean": true } }
```

```
{ "error": "invalid reference" }
```

```
{ "formula": { ... } }
```

# Formulas

```
{  
  "formula": {  
    "sum": [  
      { "reference": "A1" },  
      { "reference": "B1" }  
    ]  
  }  
}
```

Operator Name

Arguments

## Exceptions

```
{ "formula": { "value": { "number": 123 } } }  
{ "formula": { "value": { "text": "abc" } } }  
{ "formula": { "value": { "boolean": false } } }
```

```
{ "formula": { "error": "Banana" } }
```

```
{ "formula": { "reference": "A1" } }
```

Leaf Operators

# Formulas

## Some Simple Examples

=SUM(A1, B1)

```
{
  "formula": {
    "sum": [
      { "reference": "A1" },
      { "reference": "B1" }
    ]
  }
}
```

=SUM(6, 4)

```
{
  "formula": {
    "sum": [
      { "value": { "number": 6 } },
      { "value": { "number": 4 } }
    ]
  }
}
```

=SUM(6, SUM(6, 4))

```
{
  "formula": {
    "sum": [
      { "value": { "number": 6 } },
      {
        "sum": [
          { "value": { "number": 6 } },
          { "value": { "number": 4 } }
        ]
      }
    ]
  }
}
```

# Formulas: Operators

sum

multiply

divide

is\_greater

is\_equal

not

and

or

if

concat

# Plan Ahead

01

How are references  
going to be resolved?

02

How to handle errors?

Assume something is not going to  
work and you'll have to figure it out.

There's  
more!

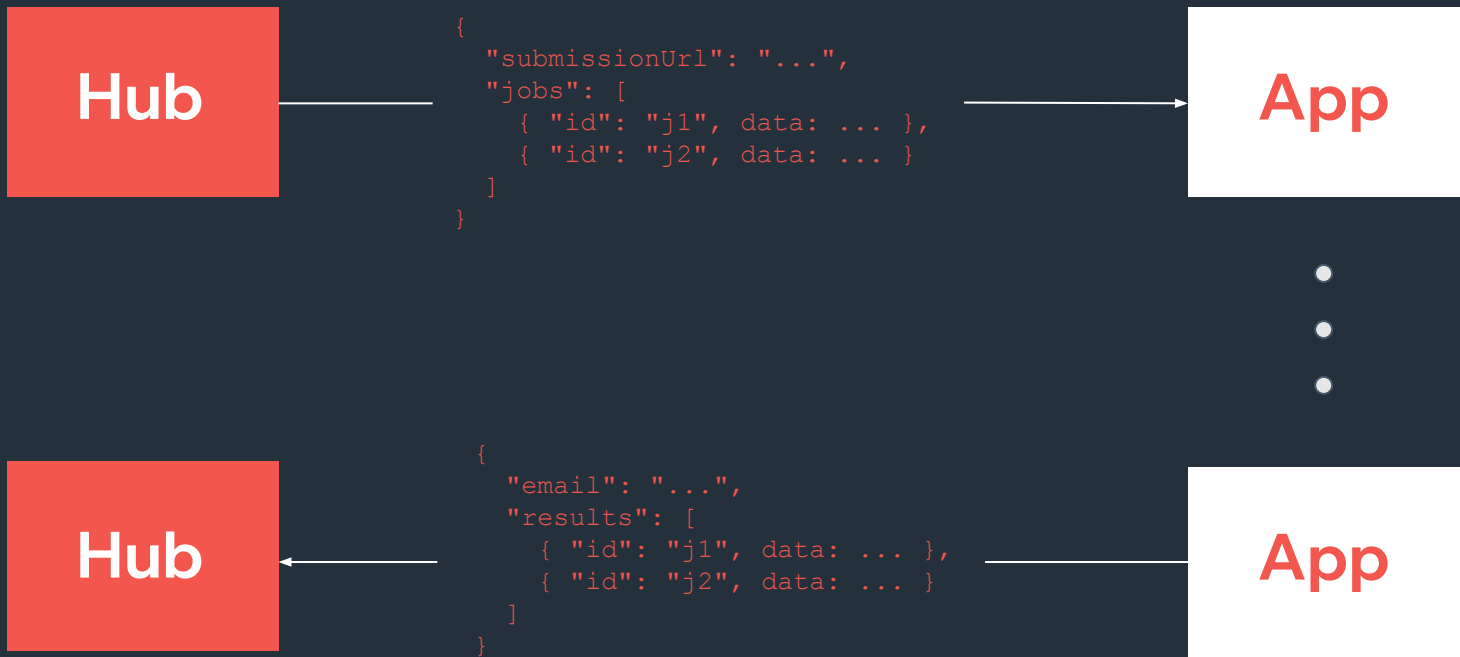

# "The hub"

Your application is "a

**worker"**

Making the requests is part of your application!

# Core of the task

```
[  
  [  
    { "value": { "number": 6 } },  
    { "value": { "number": 4 } },  
    {  
      "formula": {  
        "sum": [  
          { "reference": "A1" },  
          { "reference": "B1" }  
        ]  
      }  
    }  
  ]  
]
```

And do a  
bunch of  
those!

```
[  
  [  
    { "value": { "number": 6 } },  
    { "value": { "number": 4 } },  
    { "value": { "number": 10 } }  
  ]  
]
```

Input

Output

# Getting Jobs

```
{
  "submissionUrl": "https://wix.com/_something/submit",
  "jobs": [
    {
      "id": "j123",
      "data": [
        [
          { "value": { "number": 6 } },
          { "value": { "number": 4 } },
          {
            "formula": {
              "sum": [
                { "reference": "A1" },
                { "reference": "B1" }
              ]
            }
          }
        ]
      ]
    }
  ]
}
```

Yes, this is important

The spreadsheet  
we just covered

# Posting Jobs

```
POST <url_you_got_previously>
```

This is where it goes

```
{
  "email": "pijusn@wix.com",
  "results": [
    {
      "id": "j123",
      "data": [
        [
          { "value": { "number": 6 } },
          { "value": { "number": 4 } },
          { "value": { "number": 10 } },
        ]
      ]
    }
  ]
}
```

# Success / Failure

```
{  
  "message": "All results are correct. You can clean up and submit your source code now."  
}
```

---

or

---

```
{  
  "error": "invalid job-2 result: invalid cell B1: content does not match"  
}
```

You can use hub as much as you want.  
Submitting jobs multiple times has no penalty!

# Tech Support

Use "Reply"

# Definition of "Done"

01

Job results are accepted  
(see the response)

02

You are happy with the  
code

# Evaluation

- Requirements satisfied?
- Readable code?
- Code structure?
- Simple design?

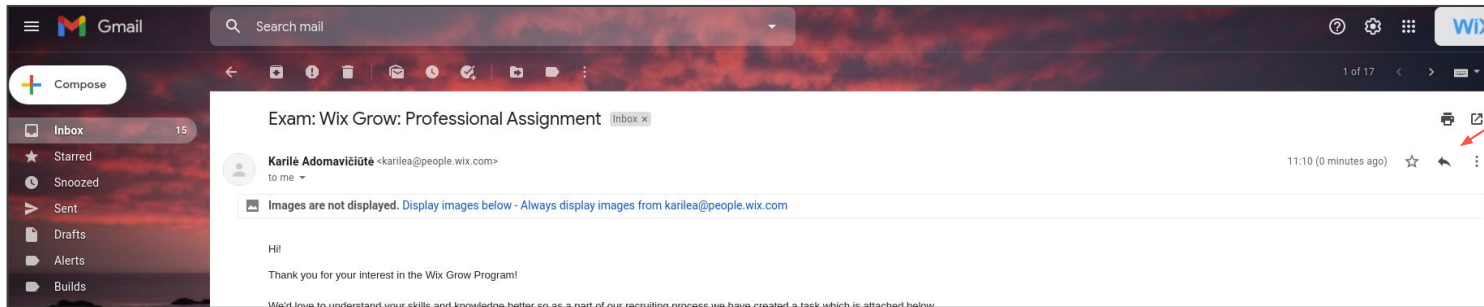

# Side-note

- 3rd parties allowed

# Submitting Code

- ZIP it, then attach it by replying to instructions email!
- Clean it up before ZIPing. Only the source code!

Use "Reply"

# Technical Interview

# What's going to happen?

- Will talk a little about you.
- Will talk a little about Wix.
- Will do some live coding.

# What do we expect?

- You can write code.
- You can reason about your code.
- You can express your ideas.
- You know what you are doing.
- You can solve basic problems

# What should you expect?

- Not to know all the answers.
  - OK to use your own words.
  - OK to "think through" the answer.
- Be asked obvious questions.
- Be asked stupid questions.

Stay Calm  
Keep Talking

**No detailed feedback :(**

**Let's move on to Q&A**
